1 Introduction

This manual describes how to create and manage user-defined fields within Compano Online Software.

1.1 Concepts

User-defined field (UDF)	A <i>User-defined field</i> (UDF) is an 'extra' data field that can be added to most Entities in the Compano software. A user-defined field is mostly used to add information for which there is no standard Compano data field.
Entity	A data object, for instance Product, Item, Project, Price, etc.
Dedicated application	Compano Online Software application which is <i>not</i> shared with other customers, which will allow customer-specific implementation of UDFs, multiple classifications systems, etc.

1.2 Dedicated application

User-defined fields are only available with a *dedicated* application. Should you wish to use user-defined fields, please contact Compano Sales, sales@compano.com to discuss the available options.

1.3 Example

The example in this guide assumes the creation of user-defined fields on the Product entity. User-defined fields can of course also be created on other entities, such as Item, Assortment, etc.

Notes:

- User-defined fields are shown on the *User-defined fields* tab (see below) of individual items.
- User-defined fields can be *grouped* in *Field chapters*.
- The *order* in which user-defined fields appear on the user-defined fields tab can be manipulated.
- Subsets of user-defined fields can be collected onto a free form tab.

The screenshot shows a software interface for editing a product. At the top, it says "Edit - 140043898 LED E T5 BATTEN 600 9W 800LM 3000K CT (langer) Opple 06956712666215". Below this, there are several tabs: "Commercial description (product) (en)", "Technical description (product) (en)", "Additional", "User-defined fields" (which is highlighted in yellow), and "Trans...". The "User-defined fields" tab contains a list of fields. One field is "UDF_Novel" with a dropdown menu showing "Yes", "No", and "Unknown", with "Unknown" selected. Another field is "Colour white RAL variants" with a dropdown menu. A section titled "Additional product information" contains fields for "In control box" (radio buttons for Yes, No, with "No" selected), "Length" (input field "Meter"), "Length (imperial)" (input field "Inch"), and "Surface area (calculated)" (input field "1000 Square meter"). A red arrow points from the heading "Additional product information" to the left side of the screen. Another red arrow points from the text "Field chapter (group) heading" to the right side of the screen.

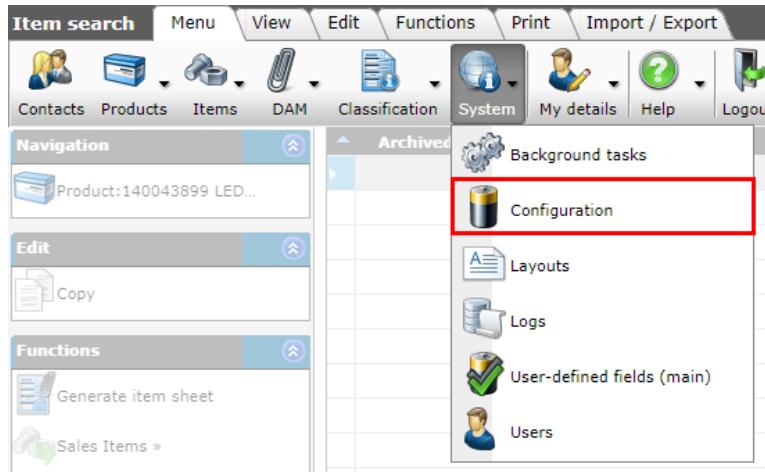

Figure 1. The user-defined fields tab

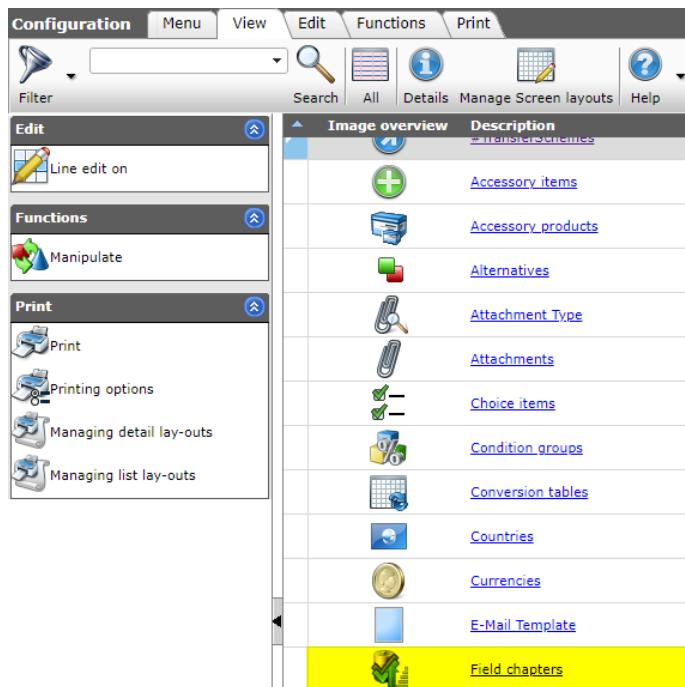

2 Field chapters (optional)

Should you need to group user-defined fields, you first need to create *Field Chapters*.

1. Through the Menu go to *System > Configuration*.

2. Click on *Field chapters*.

3. Under Edit, click on *+Add*.

The screenshot shows the 'Field chapters' screen. At the top, there's a menu bar with 'Field chapters', 'Menu', 'View', 'Edit', and 'Import / Export'. Below the menu is a toolbar with icons for 'Filter', 'Search', 'All', 'Details', and 'Manage screen'. On the left, there's a sidebar with 'Navigation' and 'Edit' sections. Under 'Edit', there are three buttons: 'Add' (highlighted with a red box), 'Modify', and 'Delete record(s)'. To the right is a table titled 'Code' and 'Description' with three rows: 'Item' (Additional item info), 'Marketing' (Additional marketi), and 'Product' (Additional product). The 'Product' row has a blue arrow icon next to it.

4. In the pop-up window:

The screenshot shows the 'Add - New field chapter' dialog box. It has tabs for 'Field chapter' (selected) and 'Translations'. Under 'Field chapter', there are fields for 'Code' (set to 'Product') and 'Description' (set to 'Additional product information'). At the bottom, there are buttons for 'Add next record', 'Save record' (highlighted with a red box), and 'Cancel'.

- Code: A short-hand code for the chapter.
- Description: A description for the chapter. This text will also show as the chapter title on the User-defined fields tab.
- Translations: Optionally, fill out the translations for this field chapter on the Translations tab.

5. Save the record.

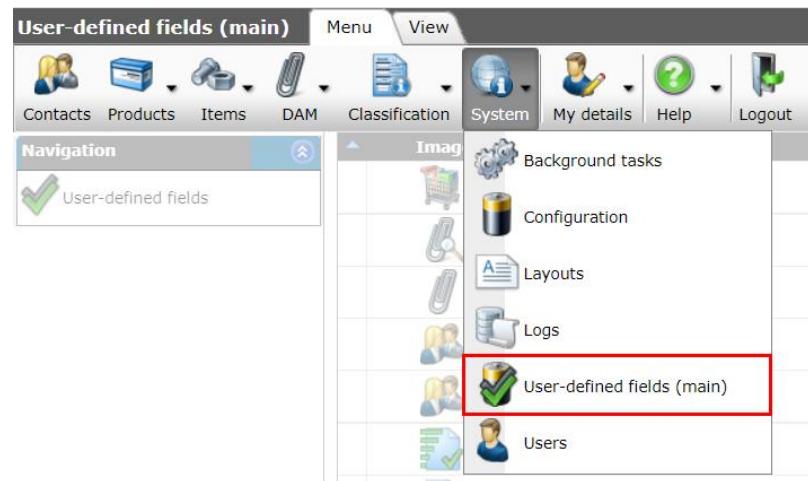

Note: When using Field chapters, it is best to assign all UDFs to a field chapter as any unassigned UDFs will show at the top of the UDF tab.

2.1 Assigning field chapters

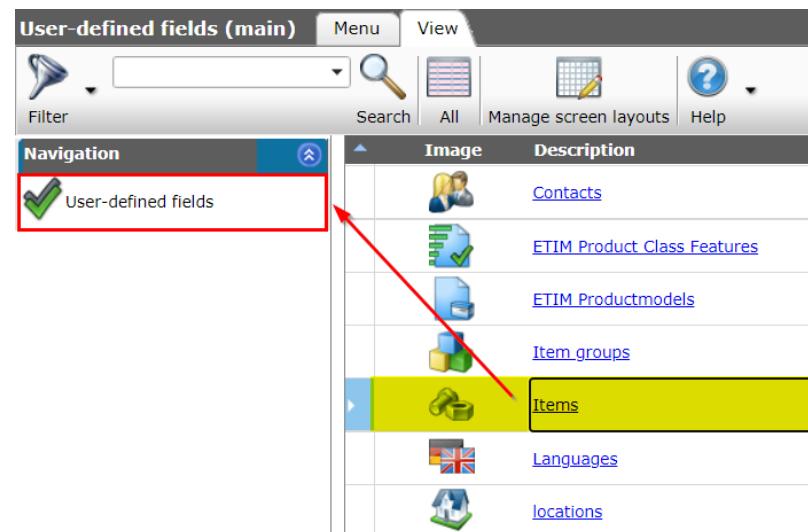

A field chapters can be assigned to an UDF during (or after) creation of the UDF:

To assign a field chapter:

- Through the Menu, go to System User-defined fields (main):

2. Select an entity and, under Navigation, click on *User-defined fields*:

3. Either Add a new UDF(see chapter [3. Creating user-defined fields](#)) or Edit an existing UDF and in the pop-up window:

Edit - Colour white RAL variants

User def field	Tooltip (en)	Memo	Translations
Name	UDF_Colour_White		
Normalized name	UDF_Colour_White		
Sequence	5	Type	Single choice
Label	Colour white RAL variants		
Header	White RAL		
Field chapter	Assortment Additional assortment information Item Additional item information Marketing Additional marketing information Product Additional product information		
Style			
Parent field			
Suffix			
Unit			
Special			
Default value			
Required			
In quick filter			
Summable			
Is copy allowed			
Mobile interface			
ShowMembers			

There are 4 Field groups found.

○ Yes No

Edit the previous one Edit the next one Check expression **Save record** Cancel

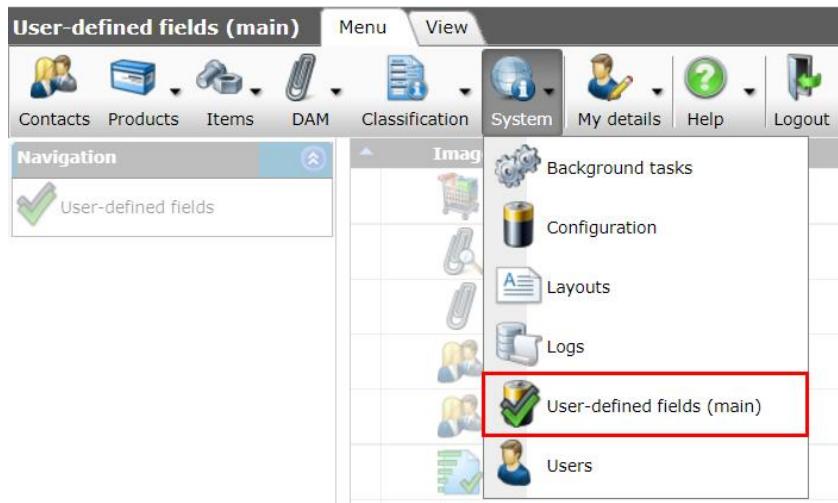

- a. Field chapter: Select one of the field chapters.
4. Save the record.

2.1.1 Manipulating field chapters

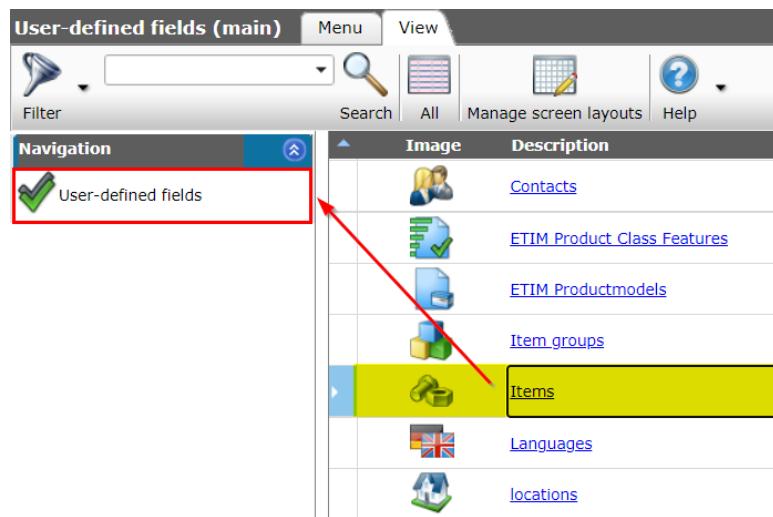

When using many field chapters, assigning field chapters to UDFs can also be accomplished through *Manipulation*.

To manipulate field chapters:

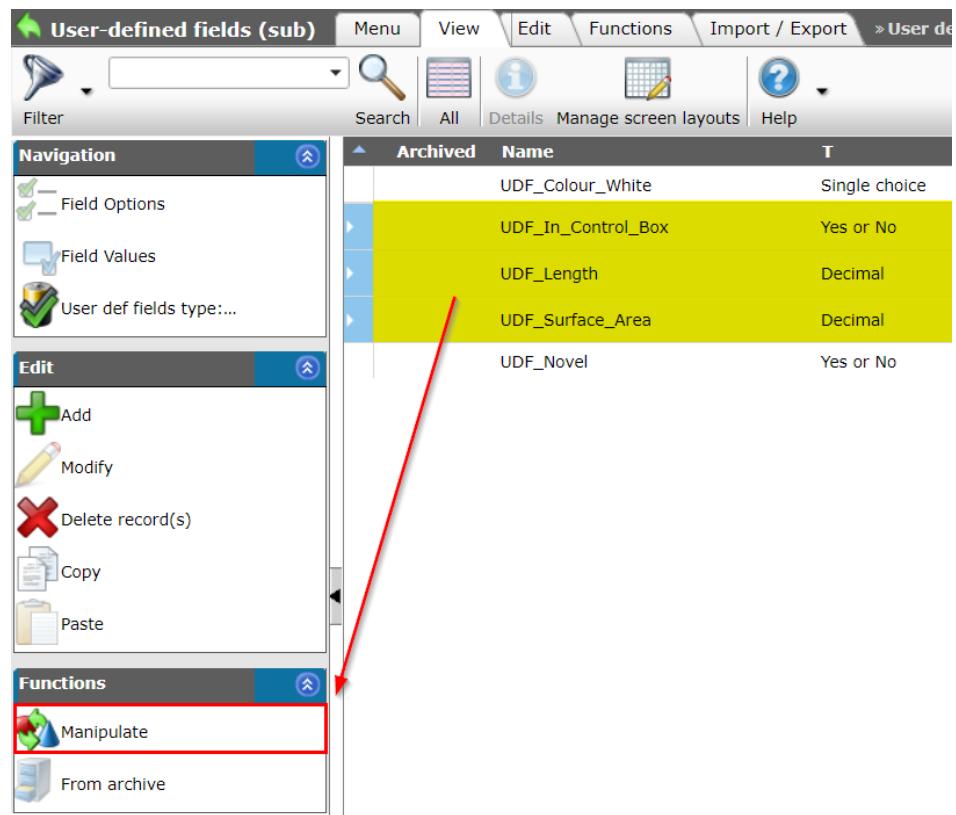

1. Through the Menu, go to *System > User-defined fields (main)*.

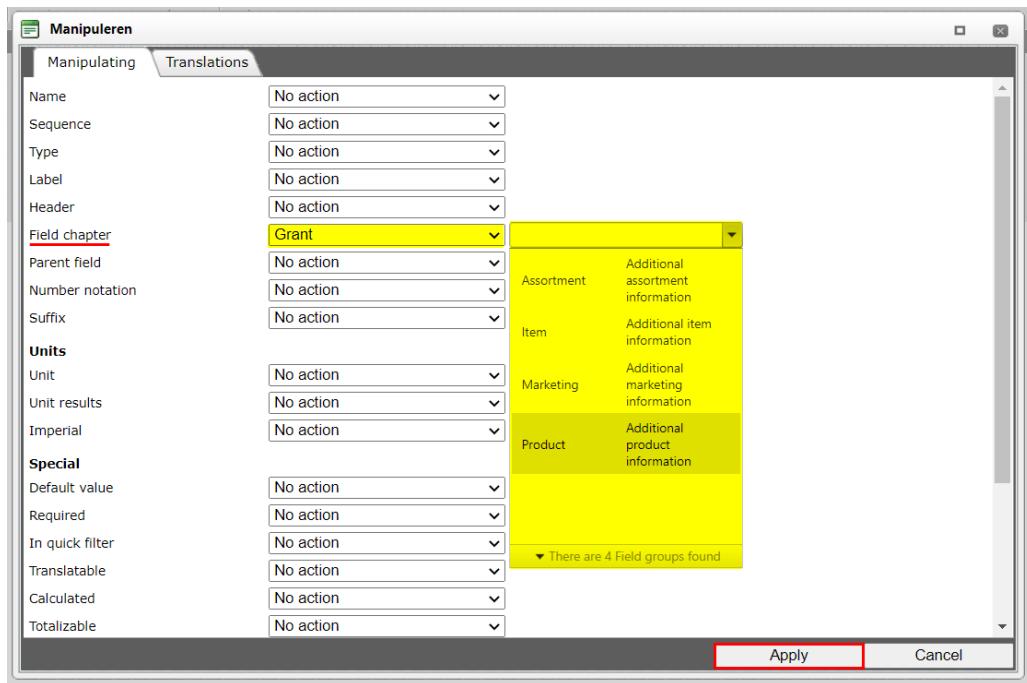

2. Select the entity and, under Navigation, click on *User-defined fields*.

3. In the Overview, select a number of user-defined fields that need to get assigned to the same field chapter and, under Functions, click on *Manipulate*.

4. In the pop-up window:

- a. Field chapter: Select **Grant** from the drop-down menu. A second drop-down menu appears from which you can select the correct field chapter.
5. Click on *Apply*.

3 Creating user-defined fields

Several different *types* of user-defined fields are available for use. Depending on the Type of field, its creation consists of one or two steps:

1. Create the user-defined field;
2. Create the Field Options (only for the types *Single Choice*, *Multiple Choice*, and *Selection List*).

3.1 Entities suitable for user-defined fields

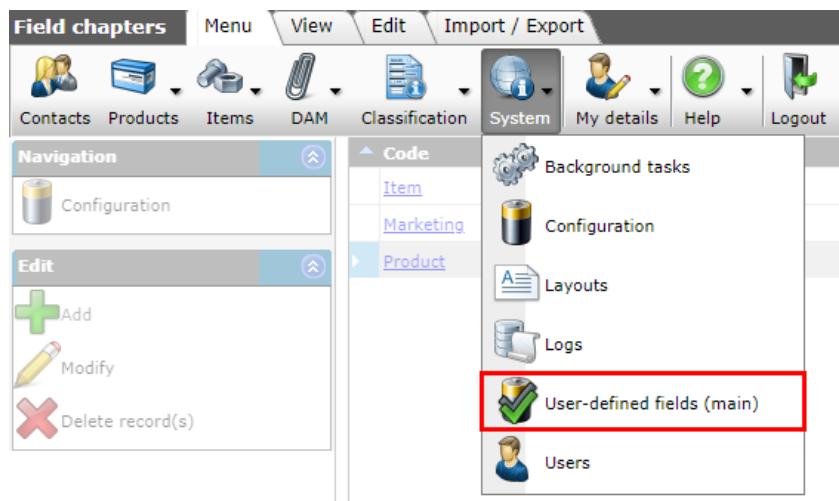

Not all entities within Compano allow for the use of user-defined fields. Suitable entities are:

Entity	UDF Types allowed
Accessory products	All
Assortment	All
Attachments	All
Attachment types	All
Cost Type	GUID
Item Groups	All
Items	All
Manufacturers	All
Product Class Features	All
Product Groups	All
Product Models	All
Products	All
Projects	GUID
Project Monitoring / Dimensions	GUID
Project Specific Materials	GUID
Publication Nodes	All
Publication Links	All
Purchase Contracts	All
Rates	GUID
Recipe Lines	All
Suppliers	All
Transfer Lines	All
Work Type	GUID

3.2 Adding a user-defined field

To add a user-defined field:

1. Through the Menu, go to *System > User-defined fields (main)*:

2. Select the Entity where you need to add a user-defined field, and click on *User-defined fields* under Navigation. Alternatively, click directly on the linked Entity:

Navigation	Image	Description
User-defined fields		Transfer rules
		Suppliers
		Purchasing Conditions
		Publicatie nodes
		Products
		Product parts

3. On the next screen, click on *+Add* to add a user-defined field.

Archived	Name
	[redacted]
	[redacted]
	[redacted]

3. In the pop-up windows:

Screenshot of the 'Edit - Noise level outdoor unit' dialog box. The 'User def field' tab is selected. The 'Name' field is set to 'UDF_Noise_Level_Outdoor_Unit'. Other visible settings include:

Setting	Value
Normalized name	UDF_Noise_Level_Outdoor_Unit
Sequence	172
Type	Decimal
Label	Noise level outdoor unit
Header	Noise level outdoor unit
Field chapter	Additional product information
Style	Standard
Unit	DECIBELA
Special	Default value: [empty]
Required	<input type="radio"/> Yes <input checked="" type="radio"/> No
In quick filter	<input type="radio"/> Yes <input checked="" type="radio"/> No
Calculated	<input type="radio"/> Yes <input checked="" type="radio"/> No
Summable	<input type="radio"/> Yes <input checked="" type="radio"/> No
Is copy allowed	<input checked="" type="radio"/> Yes <input type="radio"/> No
Mobile interface	<input type="radio"/> Yes <input checked="" type="radio"/> No
ShowMembers	<input type="radio"/> Yes <input checked="" type="radio"/> No
Application feature	[empty]

Buttons at the bottom: Add next record, Check expression, Save record (highlighted), Cancel.

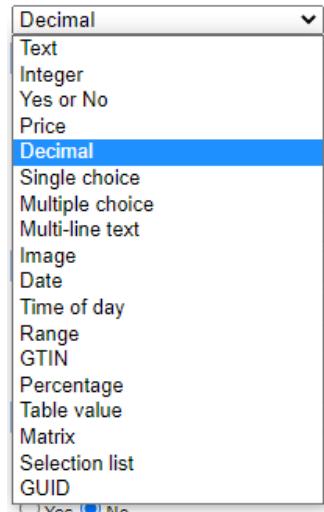

- a. Name: Type a name for the user-defined field.

Tip: Use the prefix **UDF_** to easily distinguish the user-defined field from system fields and use underscores instead of spaces to prevent problems when using UDFs in data feeds, for example: **UDF_Noise_Level_Outdoor_Unit**

- b. Sequence: Use a number to indicate in which order the user-defined field should be visible on the User-defined fields tab.
- c. Type: Choose the type of user-defined field you need to use.

Important: If you later need to link the user-defined field to an ETIM-feature, the type of the field *must match* with the data type of the ETIM-feature.

See also [Appendix A: Types of user-defined fields](#) for an explanation of the different types of fields and their options:

- d. Label: Enter a name for the label. The label will show on the tab User-defined fields.
Note: You may use spaces and/or punctuation in the name for the label.
- e. Header: Enter a name for the header that will be given to the user-defined field when added to a screen layout. Note: You may use spaces and/or punctuation in the name for the header.
- f. Field chapter (optional): Select the field chapter under which you want to sort the user-defined field.

Depending on the Type of user-defined field, one or more options can be set or checked. These options can be found under the headings *Style* and *Special* and will be discussed in the next paragraphs.

3.3 Field-specific settings

For certain user-defined fields a Style and Special options are available:

- Style: Text or number formats and units of measurement
- Special: Miscellaneous options, which differ per type of field

The dialog box has tabs at the top: Wijzigen, User defined field, Tooltip, Memo, and Translations. The 'User defined field' tab is active.

Name: (empty input field)

Type: Decimal (selected from dropdown)

Format: (highlighted with a red box)

- Number Notation: Standard (dropdown)
- Unit: (empty input field)
- Imperial: (empty input field)

Special: (highlighted with a red box)

- Default value: (empty input field)
- Required: (radio buttons: Yes (checked), No)
- In quick filter: (radio buttons: Yes (checked), No)
- Calculated: (radio buttons: Yes (checked), No)
- HTML: (radio buttons: Yes (checked), No)
- Sommable: (radio buttons: Yes (checked), No)
- Copy Along: (radio buttons: Yes (checked), No)
- Mobile interface: (radio buttons: Yes (checked), No)
- Application Feature: (empty input field)

Buttons at the bottom: Save, Cancel

3.3.1 Style

The following types of user-defined fields have Style options:

Field Type	Max length	Number notation	Suffix	Parent field	Unit	Imperial unit	Unit results
<i>Text</i>	X	-	-	-	-	-	-
<i>Integer</i>	-	X	-	-	-	-	-
<i>Decimal</i>	X	X	-	X	X	-	-
<i>Single choice</i>	-	X	X	X	-	-	-
<i>Multiple choice</i>	-	X	X	X	-	-	-
<i>Multi-line text</i>	X	-	-	-	-	-	-
<i>Range</i>	-	X	-	X	X	-	-
<i>Table value</i>	X	X	-	X	-	-	-
<i>Matrix</i>	-	X	-	-	-	-	X

Max length

The *Max length* option is used to set the maximum number of characters that can be entered into a UDF of type Text and Multi-line text.

Number notation

The options for *Number notation* indicate how the decimal number should be entered / displayed:

- Standard
- No decimal place (0)
- 1 Decimal (0.0)
- 2 Decimals (0.00)
- Three decimal places (0.000)
- Four decimal places (0.0000)

Parent field

Selection lists (*Single choice* and *Multiple choice*) can be nested, where a choice at one level determines which choices are available on a next (sub)level. Use the Parent field option to indicate on which parent field this user-defined field is dependent.

Example:

Options for COLOUR (parent)	Options for COLOUR_DETAIL (child)
White	
Grey	Light grey
	Dark grey
Black	
RAL code	9001
	9002
	9003
	9004
	9005

For more details on nested selection lists, see [Appendix B: Nested single choice](#) lists.

Suffix

A suffix can be used in combination with a Unit.

Unit

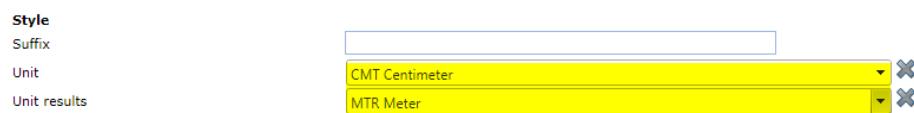

Select a *Unit* from the standard units of measurement which are available in the system. Non-standard units can be added manually, through *Menu > Configuration > Units*. Units are, for example, length in centimetres, weight in grams, etc.).

Imperial unit

Select a Unit of the Imperial system, for example, pounds, gallons, square feet, etc. Note: This is an optional feature.

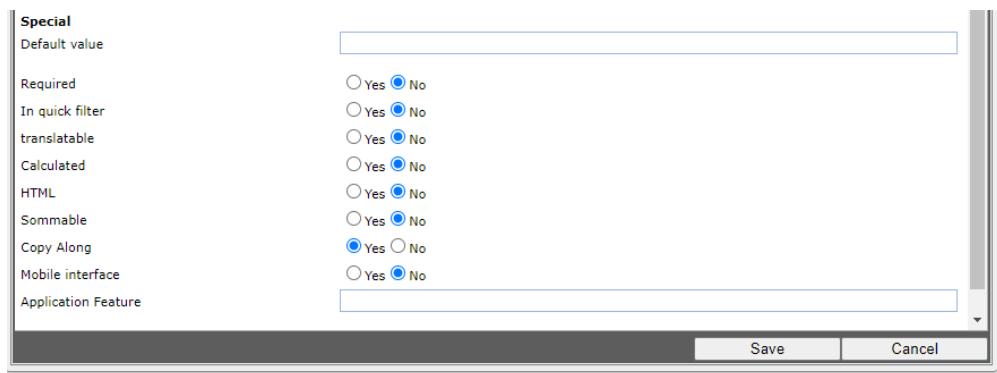

Unit results

For the user-defined field type Matrix, the type of *Unit result* must be specified. A matrix is used to record, for example, data points of a graph, or 3-dimensional coordinates. *Unit* and *Unit result* then indicate the unit of the X-, Y- and (optionally) Z-axis.

3.3.2 Special

Under the heading *Special* you will find several *optional settings* for the user-defined field:

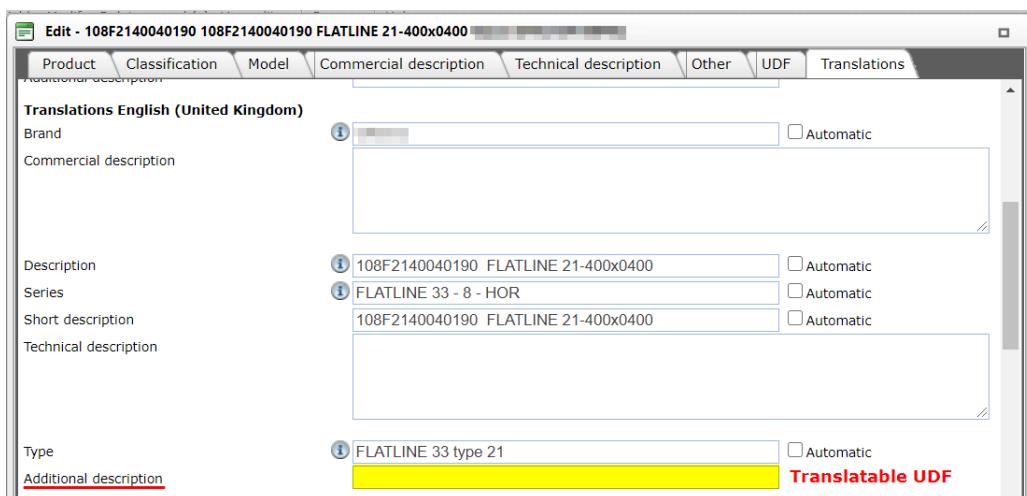

Not every field has the same options. Below you will find a matrix with the options per field:

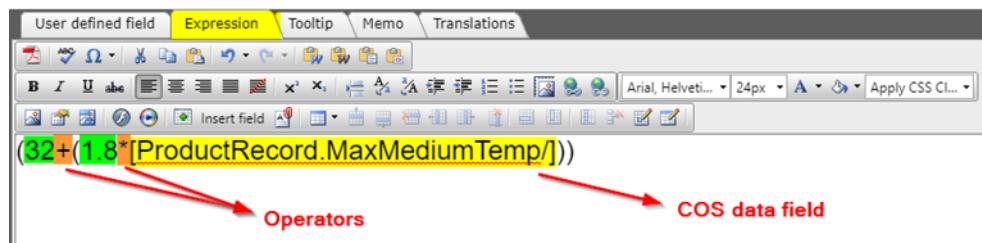

Field Type	Default value	Required	In quick filter	Translatable	Calculated	HTML	Summable	Is copy allowed	Mobile interface	Show Members	Application feature
Text	X	X	X	X	X	-	-	X	X	X	X
Integer	X	X	X	-	X	-	X	X	X	X	X
Yes or No	X	X	X	-	-	-	X	X	X	X	X
Price	X	X	X	-	X	-	X	X	X	X	X
Decimal	X	X	X	-	X	-	X	X	X	X	X
Single choice	X	X	X	-	-	X?	X	X	X	X	X
Multiple choice	X	X	X	-	-	X?	-	X	X	X	X
Multi-line text	X	X	X	X	X	X?	X	X	X	X	X
Image	X	X	X	-	-	X	X	X	X	X	X
Date	X	X	X	-	-	-	X	X	X	X	X
Time of day	X	X	X	-	-	-	X	X	X	X	X
Range	X	X	X	-	-	-	X	X	X	X	X
GTIN	X	X	X	-	-	-	X	X	X	X	X
Percentage	X	X	X	-	X	-	X	X	X	X	X
Table value	X	X	X	-	-	X	X	X	X	X	X
Matrix	X	X	X	-	-	X	X	X	X	X	X
Selection list	X	X	X	-	-	X	X	X	X	X	X
GUID	X	X	X	-	-	-	X	X?	X	X?	X

- Default value: Optionally enter a default value for the field; if no value is entered for the field, the default value is used.
- Required (**Yes/No**): Indicate whether this is a required field.
- In quick filter (**Yes/No**): Indicate whether this field should be a filter option in the Quick Filter.
- Translatable (**Yes/No**): When set to **Yes**, the field will be available on the Translations tab:

- Calculated (**Yes/No**): Setting this option to **Yes** adds an *Expression* tab to the pop-up window. Use this tab to enter a mathematical or other expression, to calculate the value of this field. Expressions can make use of other Compano database fields and/or specific functions such as CONCAT, IF, etc. For more information on Expressions, see the *Manual Expressions*.

- HTML (**Yes/No**): Set to **Yes** to indicate whether HTML-code in a text field should be translated to the correct formatting, for example the HTML-expression `bold` translates to bold. This option is often used in combination with a (calculated) text field:

- Summable (**Yes/No**): This option applies to fields of the type *Price*. Set this option to **Yes** if in a Quotation or Estimate the UDF should be included in calculations of Totals or Subtotals.

- Is copy allowed (**Yes/No**): Set to **Yes** if the value of the UDF should be copied through when copying the Entity. For example: When copying a quotation with UDFs, then the values of these UDFs are copied through into the newly created quotation.
Note: When set to **No** the value of the UDF of the copied Entity is left blank or filled out with the set default value.
- Mobile interface (**Yes/No**): Set to **Yes** if the UDF should show in Compano's mobile (web)interface.
- Show members (**Yes/No**): Set to **Yes** if the UDF should also show in any underlying¹ COS-environments. For example, when information on a product in the main environment is transferred to an underlying sub-environment, the UDF information is also transferred.
- Application feature : Use this option for filtering of data by third party applications. For example, a web shop could use the value in this field to filter products based on customer role: 'C' for Consumer and 'I' for Installation Technician.

3.4 Units

For user-defined fields of the type *Integer*, *Decimal* and *Range*, a *unit* can be selected (millimetre, kilo, kilowatt-hour, etc.).

3.4.1 Default units

Available default Units are listed under *Menu > System > Configuration > Units*. Any missing units can be added using either the *+Units metric* or *+Units Imperial* button:

Code	Type
BAR	Pressure
CEL	Temperature
CMK	Surface
CMT	Length
DAY	Time
DECIBELA	Other
DEG	Other
DMT	Length

Note: Only the most commonly used metric or imperial units will be added this way.

Adding less common units

Less common units can be added using the *+Add* button:

1. Through the Menu, go to *Configuration > Units*.
2. Click, under Navigation, on *+Add* to add a less common unit:

¹ COS-environments can be nested, with a main 'mother' environment and underlying 'daughter' and 'granddaughter' environments.

The screenshot shows the 'Units' module in the Compano software. The top menu bar includes 'Units', 'Menu', 'View', 'Edit', 'Functions', and 'Import / Export'. Below the menu is a toolbar with icons for Filter, Search, All, Details, and Manage screen. A navigation sidebar on the left lists 'Configuration', 'Edit' (with 'Units metric' and 'Imperial' options), and a red-bordered 'Add' option. To the right is a table titled 'Code' with columns 'Code' and 'Type', listing various units like BAR (Pressure), CEL (Temperature), CMK (Surface), etc.

3. In the pop-up window:

The screenshot shows the 'Add - New unit' dialog box. It has tabs for 'Unit' and 'Translations'. Under 'Unit', fields include: Type (Other), System (Metric), Code (YIELD), Abbreviation (Yield), Description (Solar panel yield per surface area), Plural description (Solar panel yield per surface area), and ICS Unit (Watt per square metre). Under 'Factors', there is a Factor field with the value 10.7639104000000000. At the bottom are buttons for 'Add next record', 'Save record' (which is redboxed), and 'Cancel'.

- Type: Select a type of Unit, for instance **Time**, **Length**, **Weight** or **Other**.
 - System: Select a measurement system, **Metric** or **Imperial**.
 - Code: Type a code for the Unit. The Unit Code may consist of letters and/or numerals.
 - Abbreviation: Type an abbreviation for the Unit.
 - Description: Type a description for the Unit (single).
 - Plural description: Type description for the Unit (plural).
 - ICS Unit: Select the correct unit from the ICS-system.
4. Save the record.

3.4.2 Metric/Imperial units²

For the user-defined field types *Decimal* and *Range*, an optional *Imperial Unit* can be selected to convert the field value to a *Imperial System* measurement. Conversion of values is done automatically by default, but can be disabled to allow for manual conversion of values.

² The option Metric/Imperial units is *not available by default*; if needed please request this option by contacting sales@compano.com.

To use Imperial units, simply select a unit value for both the Metric and Imperial unit of the UDF:

The screenshot shows the 'Edit - Bore' dialog. In the 'Unit' section, 'MMT Millimeter' and 'INH Inch' are listed under 'Unit' and are highlighted in yellow, indicating they are selected. The 'Automatic' checkbox is checked.

Conversion from metric to imperial values and vice-versa is '**automatic**'. For instance:

The screenshot shows two conversion values: '30.00' with 'Millimeter' and '1.18' with 'Inch'. Both entries have their respective unit names next to them. Below these, there is a checked checkbox labeled 'Automatic'.

Unchecking the *Automatic* tick box will allow you to set a different value:

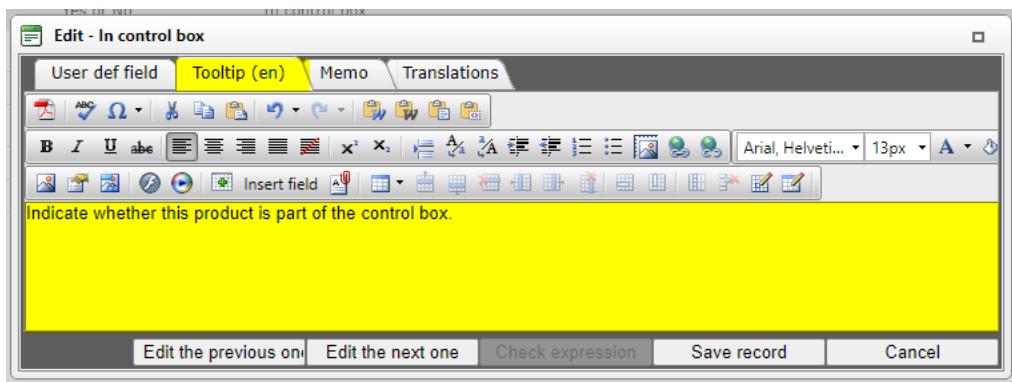

The screenshot shows two conversion values: '30.00' with 'Millimeter' and '1.20' with 'Inch'. The 'Automatic' checkbox is checked for the first entry and unchecked for the second entry.

Note: Conversion factors are managed for each unit, under *System > Configuration > Unit*.

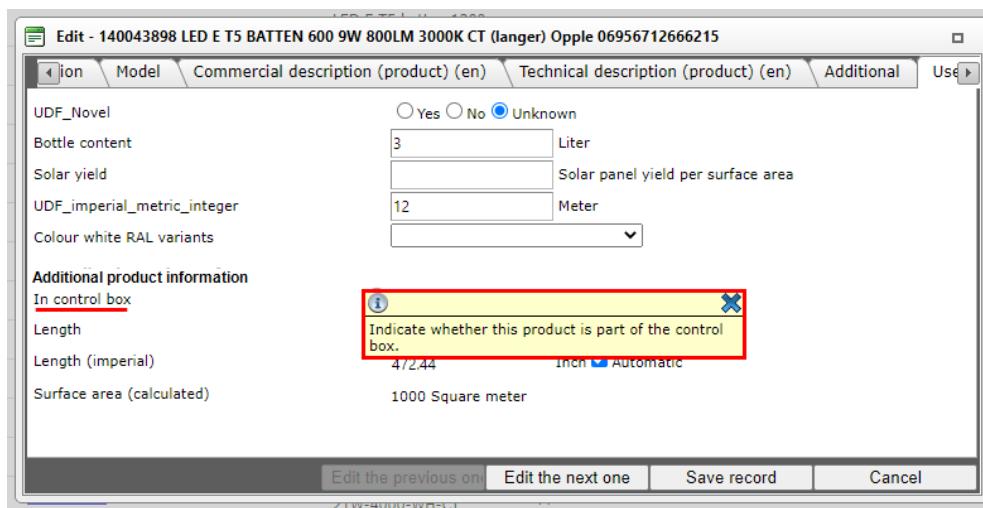

The screenshot shows the 'Edit - FOT Foot' dialog on the 'Unit' tab. The 'Type' is set to 'Length' and 'System' is set to 'Imperial'. The 'Factor' field contains '0.3048000000000000' followed by 'meter'. The 'Automatic' checkbox is checked.

3.5 Tooltip

On the tab *Tooltip* a description/explanation of the user-defined field can be entered:

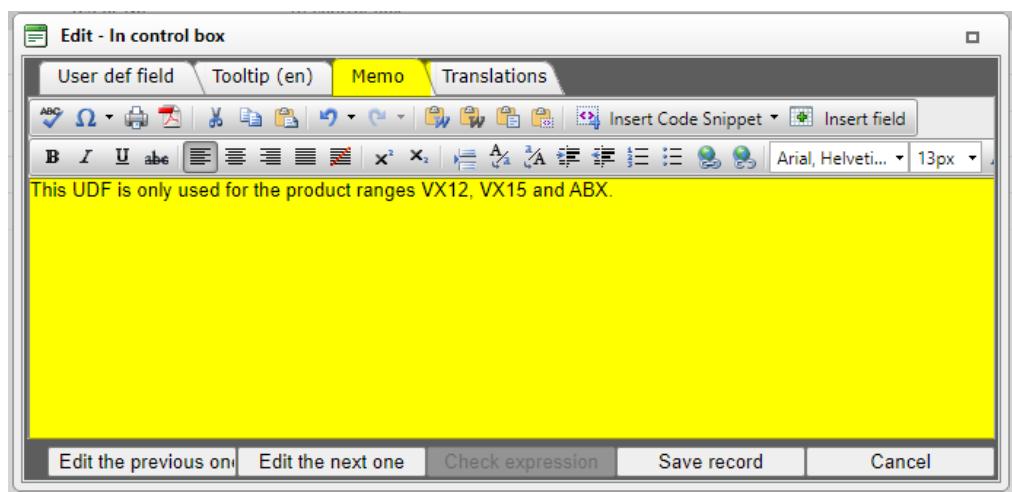

This tooltip will show next to the user-defined field on the user-defined fields tab of the Entity when the -icon is clicked:

3.6 Memo

The *Memo*-tab can be used to enter a note for internal use, for instance:

3.7 Translations

Translations can be entered on the Translations-tab for the fields:

- Header
- Label
- Suffix
- Tooltip

Translations Dutch (Standard)

Header	Monsterkast	<input checked="" type="checkbox"/> Automatic
Label	Monsterkast	<input checked="" type="checkbox"/> Automatic
Suffix		
Tooltip	Geef aan of dit product deel uit maakt van de monsterkast.	

Translations German

Header	Monsterkast	<input checked="" type="checkbox"/> Automatic
Label	Monsterkast	<input checked="" type="checkbox"/> Automatic
Suffix		
Tooltip	Geef aan of dit product deel uit maakt van de monsterkast.	

Translations English

Header	Control Box	<input type="checkbox"/> Automatic
Label	In control box	<input type="checkbox"/> Automatic
Suffix		
Tooltip	Indicate whether this product is part of the control box.	

Automatic fallback

The option *Automatic* can be used to direct the fallback of values/translations. In the example above:

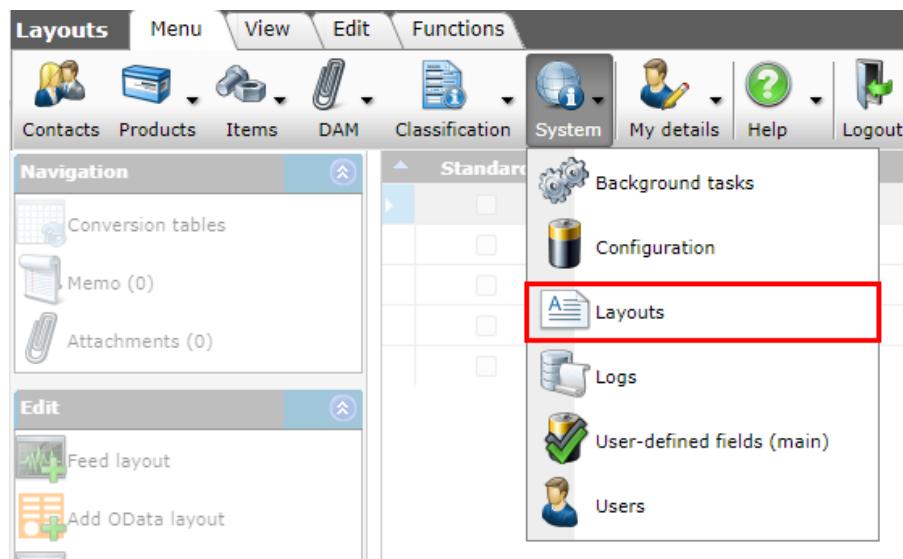

1. The value of *Header* falls back to the value entered at *Label*.
2. The values of *Header*, *Label*, *Suffix* and *Tooltip* all fall back to the values entered at their Dutch counterparts.
3. The values of *Header*, *Label*, *Suffix* and *Tooltip* have been entered as English translations and do *not* fall back.

4 Collection tab

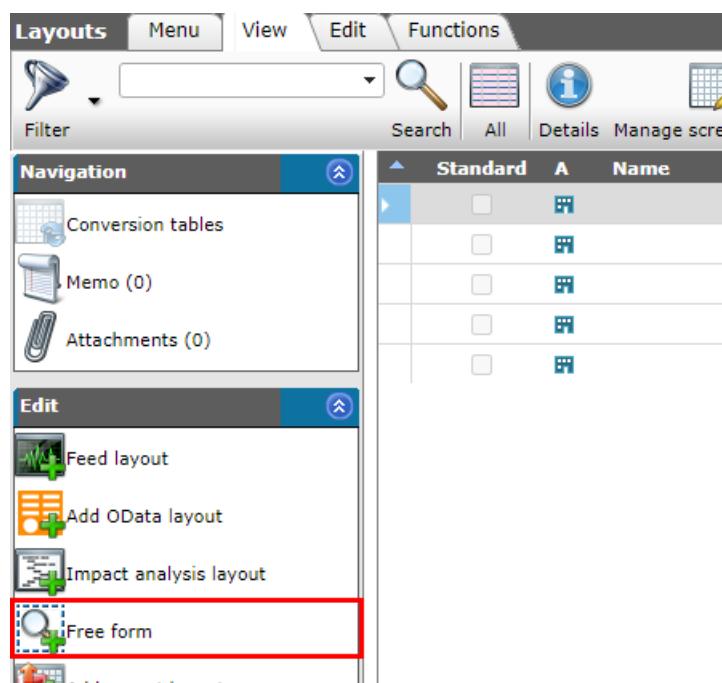

Subsets of user-defined fields can be collected on one or more collection tabs. Collection tabs need to be defined per Entity:

1. Through the Menu, go to *System > Layouts*.

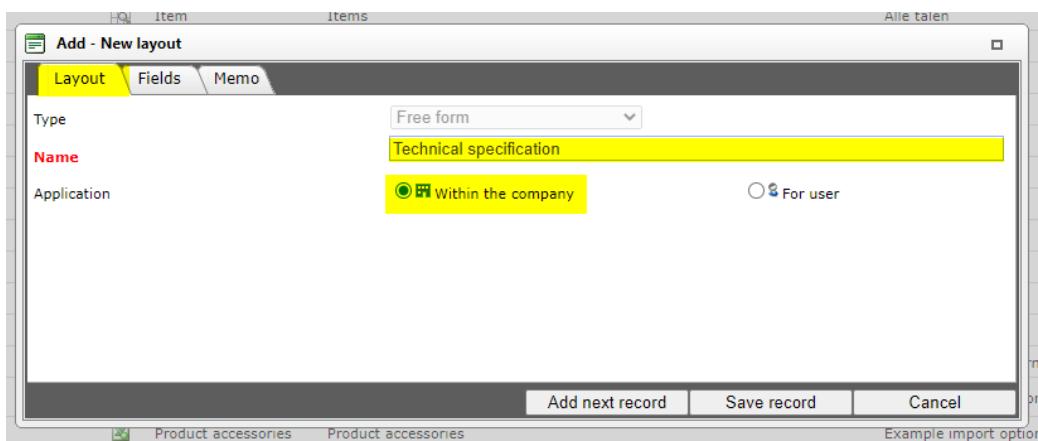

2. Under Edit, click on *+Free Form*.

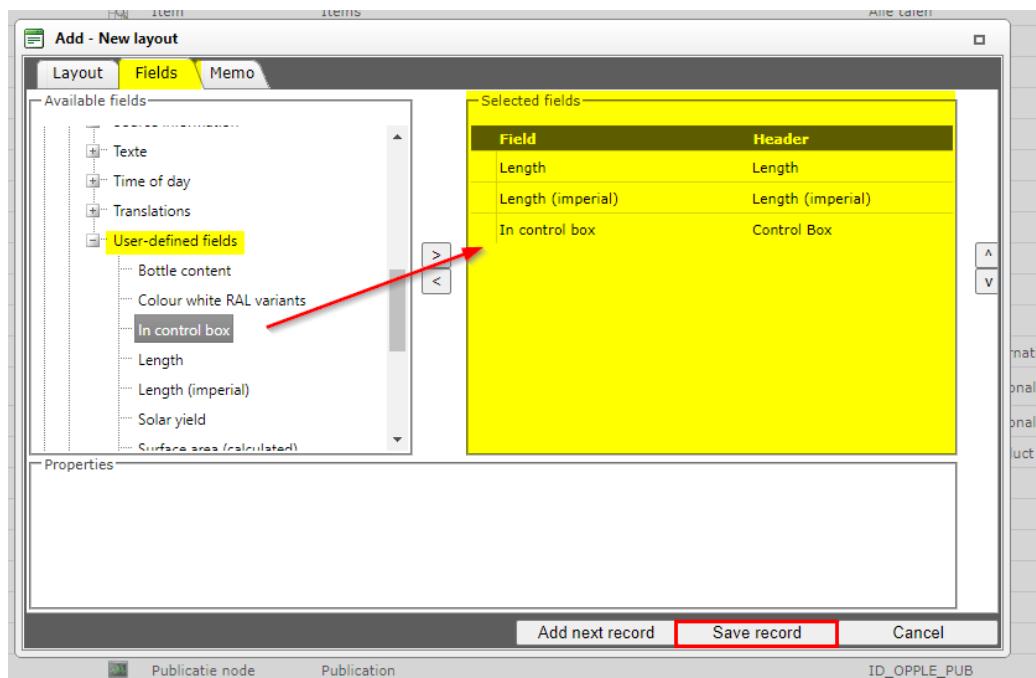

3. In the pop-up window:

Layout tab

- Name: Enter a name for the Collection tab.
 - Application: Set to **Within the company**.
4. Next, go to the Fields tab and select which user-defined fields are to be shown in this Collection:

Fields tab

- Available fields: Select user-defined fields from the correct category and move them to the Selected Fields column with the >-button.
5. Save the record.

The Collection Tab will show as the first tab in the View/Edit window of the Entity for which it was created, for instance on Product:

Edit - 140043898 LED E T5 BATTEN 600 9W 800LM 3000K CT (langer) Opple 06956712666215

Technical specification		Product	Classification	Model	Commercial description
Length	12.00	Meter			
Length (imperial)	472.44	Inch <input checked="" type="checkbox"/> Automatic			
In control box	<input type="radio"/> Yes <input checked="" type="radio"/> No				

Edit the previous one Edit the next one Save record Cancel

4.1 Multiple collections

Multiple collections of user-defined fields can be made by adding more Free From layouts for the same entity. Collections can be selected through a drop-down menu on the Collection Tab:

Edit - 140043898 LED E T5 BATTEN 600 9W 800LM 3000K CT (langer) Opple 06956712666215

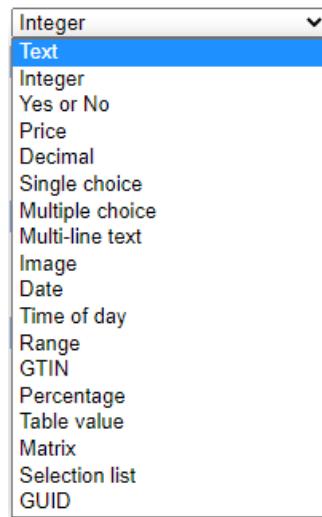

Technical specification		Product	Classification	Model	Commercial description (product) (en)	Technical description (product) (en)
Show fields	Length	Technical specification	Technical specification	Colour		
Length	472.44	Inch <input checked="" type="checkbox"/> Automatic				
In control box	<input type="radio"/> Yes <input checked="" type="radio"/> No					

Edit the previous one Edit the next one Save record Cancel

5 Appendix A: Types of user-defined fields

When creating user-defined fields, the following types of field can be selected:

5.1 Text

Use: The Text UDF can be used for unformatted text values.

Data types allowed: 256 alpha-numeric characters

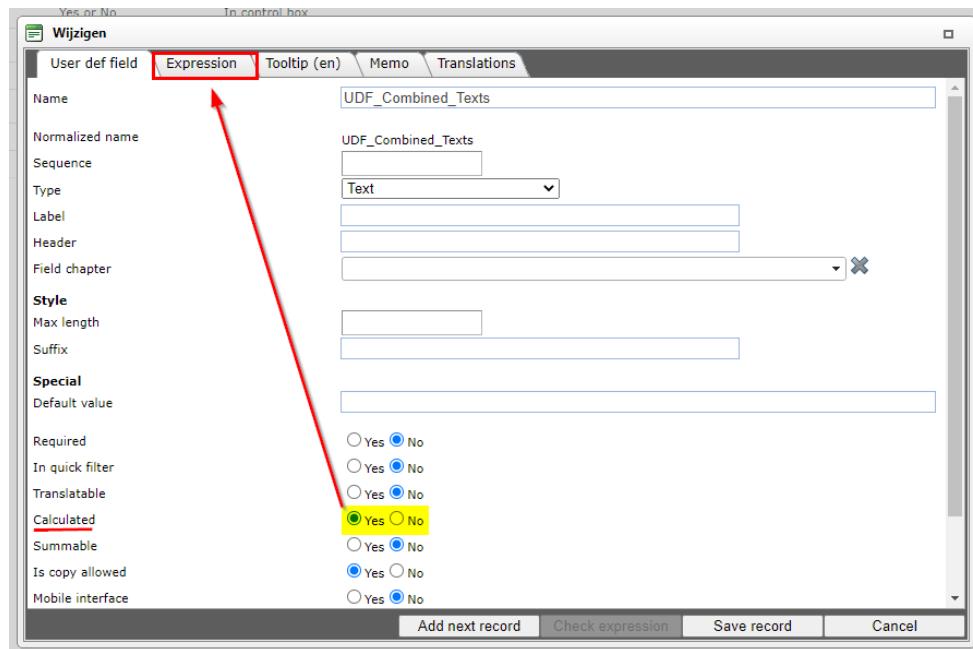

5.1.1 Max length

The default length of a user-defined field of type *Text* is 256 characters. By entering a value for Max Length, the number of characters can be expanded.

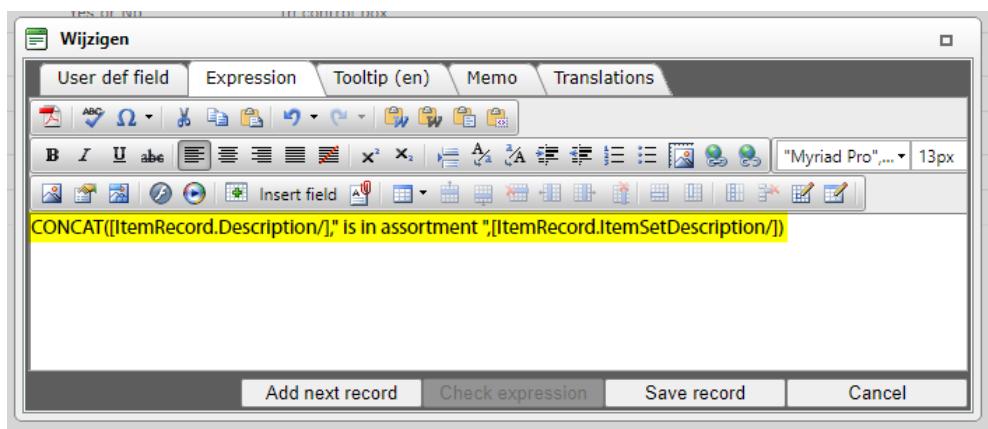

5.1.2 Calculated: Combining texts

The user-defined field of type *Text* can be used to combine multiple text values into one long text:

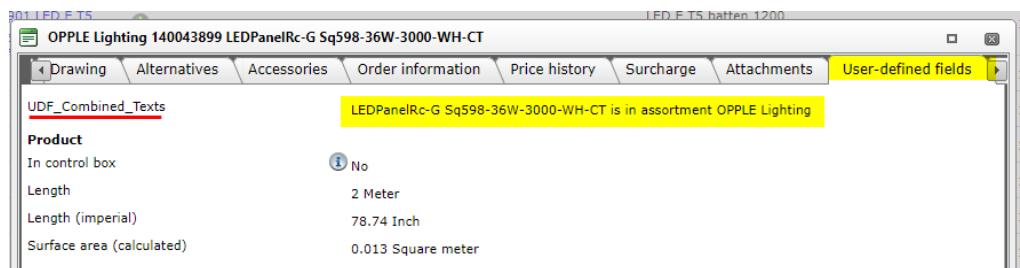

1. Create a new UDF of type *Text* and set the option *Calculated* to **Yes**; a new tab Expression will appear:

2. On the Expression tab, create a formula using the CONCAT function to combine texts, for instance:

3. The resulting text value for a record will be:

CONCAT function
Concatenate (combine) two or more text strings.

Syntax

CONCAT(string1, string2, etc)

Parameters

String# Data fields; must be a text (string) field, or a manually entered text enclosed in double quotes

Example

Display in which Assortment the Item is present:

```
CONCAT([ItemRecord.Description/]," is in assortment
',[ItemRecord.ItemSetDescription/]) → "Brass Fitting F12 is in
assortment VHX Netherlands"
```

5.2 Yes or No

Use: The Yes or No UDF can be used for Logical data.

Data types allowed: 0, 1, Yes, No, Ja, Nee, Nein, Y, N, J, <empty>

The screenshot shows the 'Wijzigen' (Change) dialog box for a 'Yes or No' user-defined field. The 'Name' field is set to 'UDF_Yes_or_No'. The 'Type' dropdown is set to 'Yes or No'. There are several groups of radio buttons for different settings:

- Required: Yes (selected)
- In quick filter: Yes (selected)
- Summable: Yes (selected)
- Is copy allowed: Yes (selected)
- Mobile interface: Yes (selected)
- ShowMembers: Yes (selected)
- Application feature: Unknown (empty)

The Yes or No data field can be left unspecified (empty) on import. This will result in an ETIM value of **Unknown**.

5.3 Price

Use: The Price UDF is used for any type of price; gross price, net price, etc.

Data types allowed: Numeric (currency)

Yes or No In control box

5.5 Single choice

Use: The Single choice UDF can be used to create a single choice drop-down list.

Data types allowed: Alphanumeric

Note: The field options (choices) for a single choice UDF need to be created separately.

The screenshot shows the 'Wijzigen' (Edit) dialog box for a user-defined field. The 'Name' field is set to 'UDF_Single_Choice'. The 'Type' dropdown is set to 'Single choice'. Other settings include 'Label' and 'Header' fields, and various checkboxes for 'Required', 'In quick filter', 'Summable', 'Is copy allowed', 'Mobile interface', 'ShowMembers', and 'Application feature'.

5.5.1 Field options

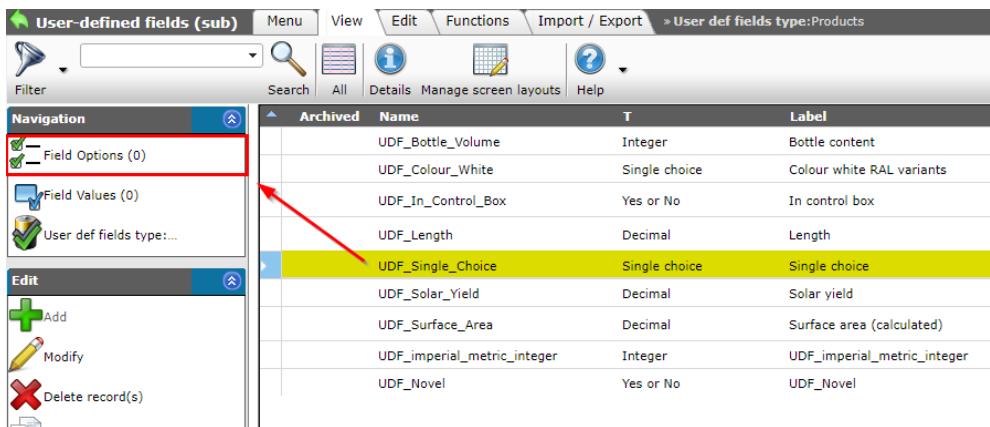

Field options must be created for the following types of user-defined fields:

- Single choice
- Multiple choice

Note: For the user-defined field type *Selection list*, you do *not* need to create field options. However, the options for the Selection list filter tab, need to be created for a user-defined field of the type *Multiple Choice*. See paragraph [5.15 Selection list](#) for more details.

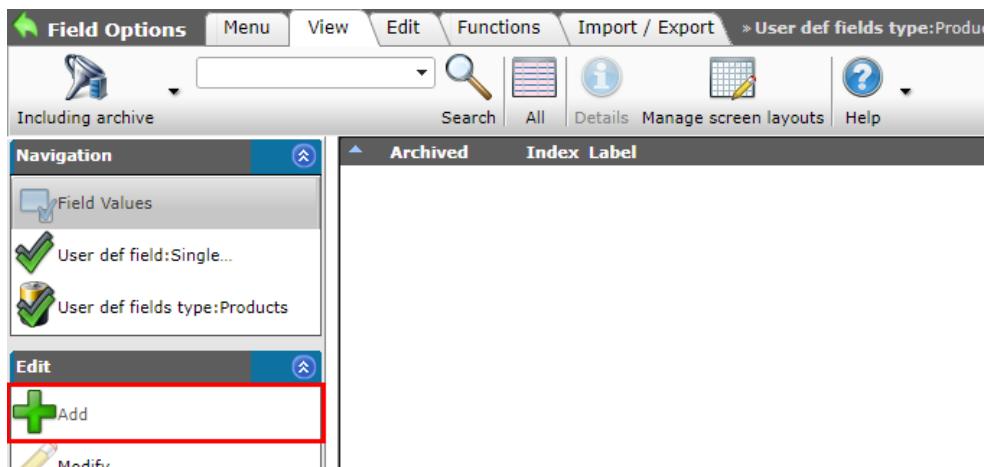

To add field options for a single or multiple choice user-defined field:

1. After creating a single or multiple choice UDF, under Navigation, click on *Field options*.

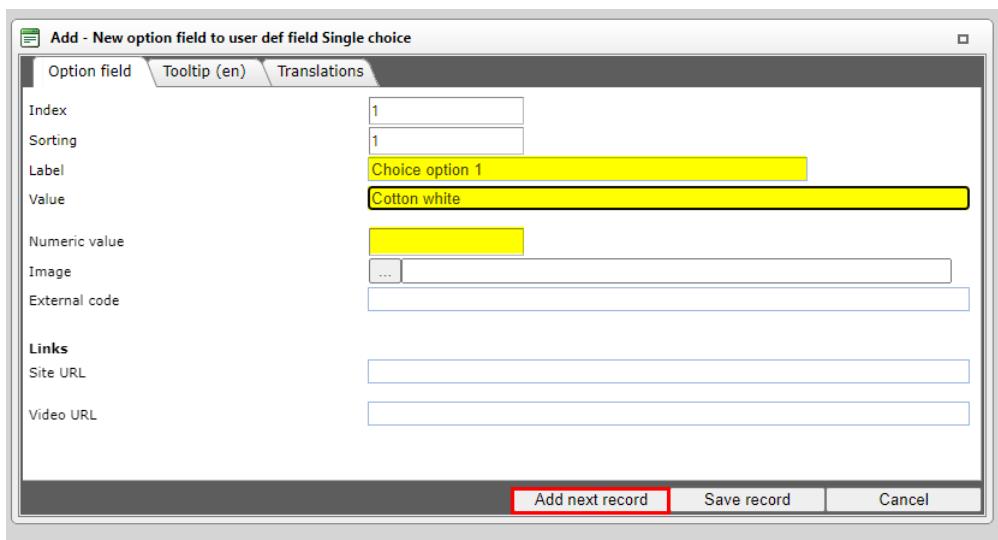

Archived	Name	T	Label
	UDF_Bottle_Volume	Integer	Bottle content
	UDF_Colour_White	Single choice	Colour white RAL variants
	UDF_In_Control_Box	Yes or No	In control box
	UDF_Length	Decimal	Length
	UDF_Single_Choice	Single choice	Single choice
	UDF_Solar_Yield	Decimal	Solar yield
	UDF_Surface_Area	Decimal	Surface area (calculated)
	UDF_imperial_metric_integer	Integer	UDF_imperial_metric_integer
	UDF_Novel	Yes or No	UDF_Novel

2. On the next screen, click on +Add to add the first option (choice):

Archived	Index	Label

3. In the pop-up window:

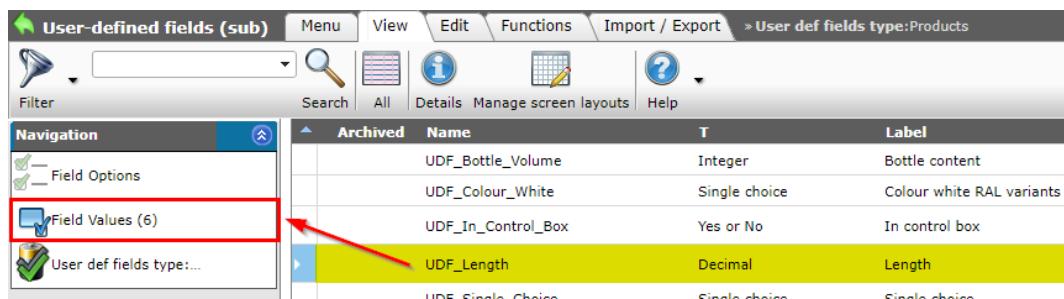

Index	1
Sorting	1
Label	Choice option 1
Value	Cotton white
Numeric value	
Image	...
External code	
Links	
Site URL	
Video URL	

- a. Index: The index number is automatically increased and uniquely identifies the field option. It is recommended to use the generated index.
- b. Sorting: Field options are sorted in the drop-down list box according to this sorting order.

- c. Label: Enter a label for the field option; the option will appear under this name in the drop-down list box.
 - d. Value: Enter an alphanumerical value for the field option. Note: the value of a field option can be different from the label.
 - e. Numeric value: Enter a numeric value for the field option.
 - f. Image: Link an image to the field option. The link to the image can be used to display, for instance, an icon with each choice on the website. Note: the image will *not* show in the COS interface.
4. Click on *Add next record* to enter a second, third, etc. option.
5. Click on *Save record* to save the (last) option.

Note: The option Field values, under Navigation, will show all records for which this option is in use, i.e. is filled out:

Archived	Name	T	Label
	UDF_Bottle_Volume	Integer	Bottle content
	UDF_Colour_White	Single choice	Colour white RAL variants
	UDF_In_Control_Box	Yes or No	In control box
	UDF_Length	Decimal	Length
	UDF_Single_Choice	Single choice	Single choice

5.7.1 Max length

This UDF is limited to 2000 characters when used for *unformatted* text. By entering a value for *Max Length*, the number of characters can be expanded.

5.7.2 HTML

When the option *HTML* is set to **Yes**, the text may contain HTML-tags, such as , <p>, , etc. Also, the number of characters that the field can contain is no longer limited.

5.8 Image

Use: The Image UDF adds an image selector to the entity, with which an image can be added.
Data types allowed: Any type of image file.

The screenshot shows the 'Edit - UDF_Image' dialog box. The 'User def field' tab is selected. The 'Name' field contains 'UDF_Image'. The 'Type' dropdown is set to 'Image'. Other fields include 'Normalized name' (UDF_Image), 'Label' (empty), 'Header' (empty), 'Field chapter' (empty), 'Style' (empty), 'Suffix' (empty), 'Default value' (empty), 'Required' (radio button for 'No' is selected), 'In quick filter' (radio button for 'No' is selected), 'Summable' (radio button for 'No' is selected), 'Is copy allowed' (radio button for 'Yes' is selected), 'Mobile interface' (radio button for 'No' is selected), 'ShowMembers' (radio button for 'No' is selected), and 'Application feature' (empty). At the bottom, there are buttons for 'Edit the previous one', 'Edit the next one', 'Check expression', 'Save record', and 'Cancel'.

Note: At the entity to which this UDF is added, an image can be upload/selected:

5.12 GTIN

Use: The GTIN UDF can be used to add a GTIN number.

Data types allowed: GTIN number

The screenshot shows the 'Wijzigen' (Edit) dialog box for a User def field named 'UDF_GTIN'. The 'Type' dropdown is set to 'GTIN'. Other fields include 'Label', 'Header', 'Field chapter' (with a delete icon), 'Style', 'Suffix', 'Default value', 'Required' (radio buttons for Yes and No), 'In quick filter' (radio buttons for Yes and No), 'Summable' (radio buttons for Yes and No), 'Is copy allowed' (radio buttons for Yes and No), 'Mobile interface' (radio buttons for Yes and No), 'ShowMembers' (radio buttons for Yes and No), and 'Application feature'.

Note: The GTIN data field will be checked for proper formatting/value:

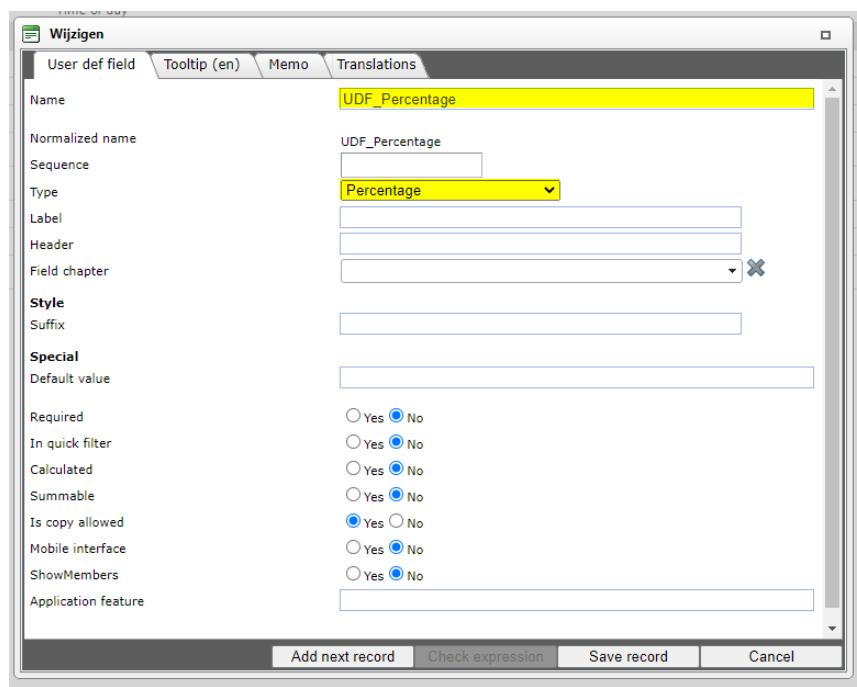

5.13 Percentage

Use: The Percentage UDF can be used to add a percentage.

Data types allowed: Percentage (decimal)

5.14 Table value

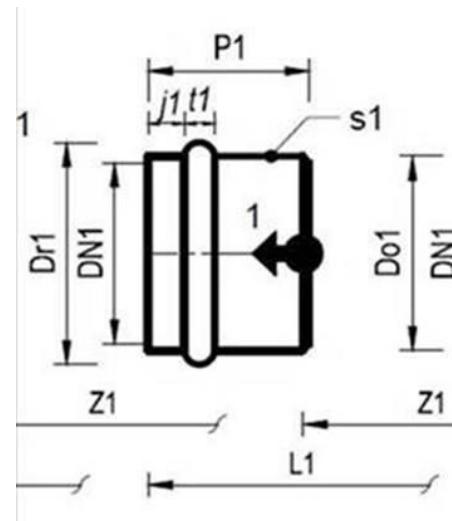

Use: The Table value UDF can be used to add a standard table value.

Data types allowed: Numeric (decimal)

Some products are available in standardized sizes, where essential dimensions are defined according to a standard table of measurements. Thus, a *Table value UDF* can be used with a standard table to look up the corresponding OUT value based on a given IN value:

Example

Measure	j1	t1	P1.	s1
12	0	6,2	17	1,5
15	0	7	20	1,5
18	0	7	20	1,5
22	0	8	21	1,5
28	0	8,2	23	1,5
35	0	8,2	26	1,5
42	0	9,8	30	1,5
54	0	9,7	35	1,5
66,7	0	13,6	50	1,8
76,1	0	14,8	55	2
88,9	0	17	63	2
108	0	20,2	77	2

Given the input value: $d1=28$, the outgoing values $j1 = 0$, $t1 = 8.2$ etc. apply.

More information on Standard tables can be found in the *Manual Standard Tables*, which is available on the Compano Help website.

5.15 Selection list

Use: This type of user-defined field allows for selection of a specific role for a person from a pre-defined list of roles.

Data types allowed: Special, See example below.

Entities: The selection list field can only be used with the entities:

- Contact persons
- Units
- Packing forms

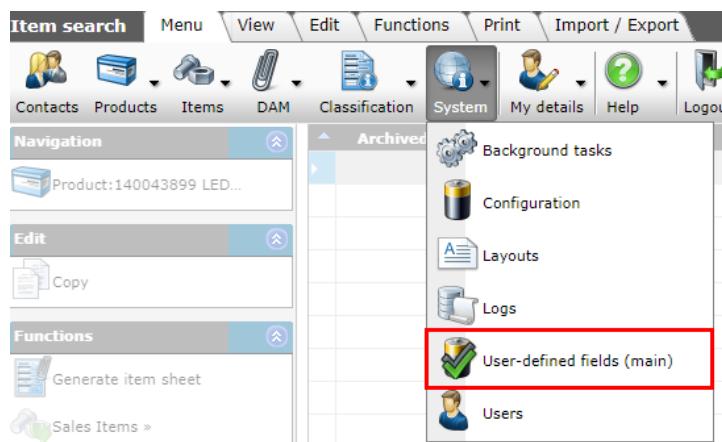

Example

An installation project involves various parties, including a contractor, plumbing installer, tiler and more. In order to assign the right people to each project, the wholesaler can choose from a list of people who can fulfill this role.

5.15.1 Create [multiple] choice list

Before you can add a selection list, first a multiple choice list with roles needs to be created:

1. Through the Menu go *System > User-defined fields (main)*.

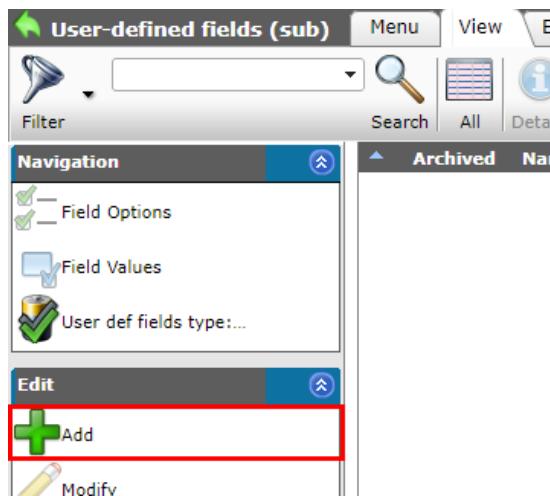

2. From the list, click on the link Contact persons

Image	Description
	#CostCenter
	Assortments
	Attachment types
	Attachments
	Bonus specifications
	Calculation Lines
	Calculations
	Contact persons
	Contacts

3. Under Edit, click on *+Add*:

4. In the pop-up screen fill out the following fields:

Wijzigen

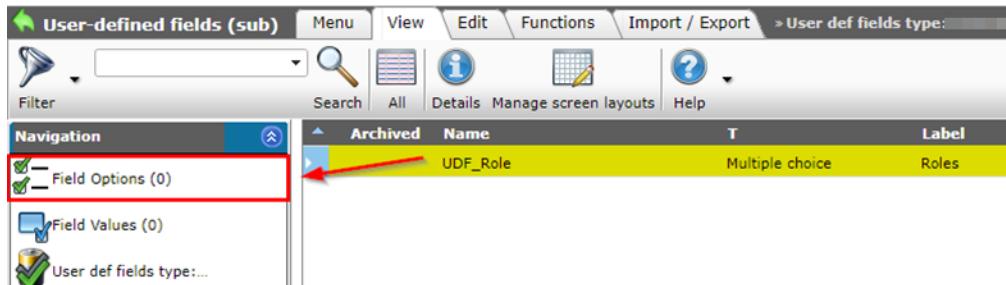

User def field	Tooltip (en)	Memo	Translations
Name	UDF_Role		
Normalized name	UDF_Role		
Sequence			
Type	Multiple choice		
Label	Roles		
Header	Roles		
Field chapter			
Style			
Parent field			
Suffix			
Unit			
Special			
Default value			
Required	<input type="radio"/> Yes	<input checked="" type="radio"/> No	
In quick filter	<input type="radio"/> Yes	<input checked="" type="radio"/> No	
<input type="button" value="Add next record"/> <input type="button" value="Check expression"/> <input style="border: 2px solid red; background-color: yellow; color: black; font-weight: bold; font-size: 10pt; padding: 2px 10px;" type="button" value="Save record"/> <input type="button" value="Cancel"/>			

- Name: Type a name for the user-defined field.
- Type: For a selection list, either use a *Multiple Choice* (choose from multiple roles), or *Single Choice* (choose one specific role) type. *Tip:* Use Multiple Choice, as the use of one user-defined field with multiple options suffices.
- Label: Type a label for the field.
- Header: Type a header for the field.

5.15.2 Add [multiple] choice list options

Create the list options:

- Select the (multiple) choice list that you just made and, under Navigation, click on *Field options*.

Archived	Name	Type	Label
	UDF_Role	Multiple choice	Roles

- Under Edit, use the *+Add* button to add all list options:

Add - New option field to user def field Roles

	Option field	Tooltip (en)	Translations
Index	1		
Sorting	1		
Label	Contractor		
Value	Contractor		
Numeric value	1.00		
Image	<input type="button" value="..."/>		
External code			
Links			
Site URL			
Video URL			

Add next record **Save record** **Cancel**

3. For each option, fill out the following data:
 - a. Index: This field is filled out automatically.
 - b. Sorting (optional): Indicate where you want to see this option in the drop-down list
 - c. Label: Type a name for the label. Note: The name for the label allows you to use spaces and/or punctuation marks. E.g.: **at night**
 - d. Value: Specify the value for this choice; in this example, the *role*. Note: When entering the value, *do not* use spaces and punctuation marks. E.g.: **at_night**
 - e. Numeric value: In certain situations, an (alphanumeric) value cannot be handled properly. In that case, specify a *numeric value* here as well. Note: Choose a *unique* number for each option.

5.15.3 Set roles

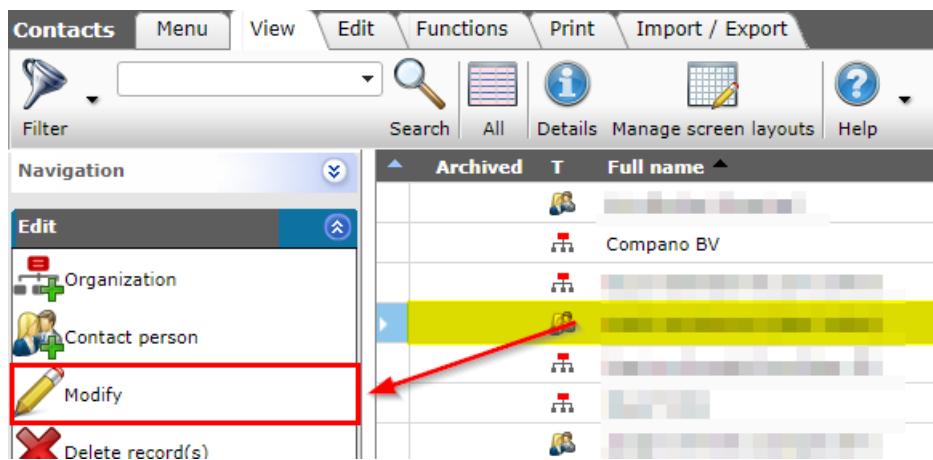

You can now set the role(s) for each person:

1. Through the Menu, go to *Menu > Contacts*:

The screenshot shows the Compano software interface. At the top, there is a menu bar with tabs: Contacts, Menu, View, Edit, Functions, Print, Import / Export. Below the menu bar is a toolbar with various icons: Contacts (highlighted with a red box), Products, Items, DAM, Classification, System, My details, Help, and Logout. On the left side, there is a navigation sidebar with sections: Contact persons, Memo (0), Attachments (0), and Organization:Heering The main area displays a table titled "Archived" with columns: T and Full name. The table lists several entries: Compano BV, Duco Ventilation & Sun Control, Heering Kunststof profielen BV, Ideal Tridon, nits, OPPLE Lighting, Sagroo, and Arie Bucher (Heering).

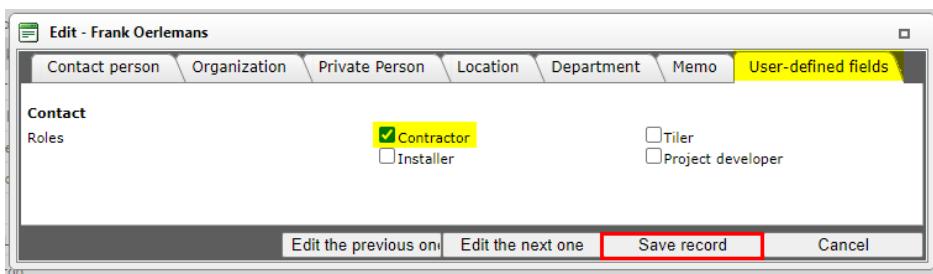

2. Select a contact and, under Edit, click on *Modify*.

The screenshot shows the 'Contacts' application interface. The top menu bar includes 'Contacts', 'Menu', 'View', 'Edit', 'Functions', 'Print', 'Import / Export'. Below the menu is a toolbar with icons for Filter, Search, All, Details, Manage screen layouts, and Help. On the left, a navigation panel under 'Edit' shows 'Organization', 'Contact person', 'Modify' (which is highlighted with a red box), and 'Delete record(s)'. The main area displays a list of contacts with columns for 'Archived', 'T', and 'Full name'. A specific contact record is highlighted with a yellow bar.

3. Go to the *User-defined fields* tab and select one (or more) roles for this contact:

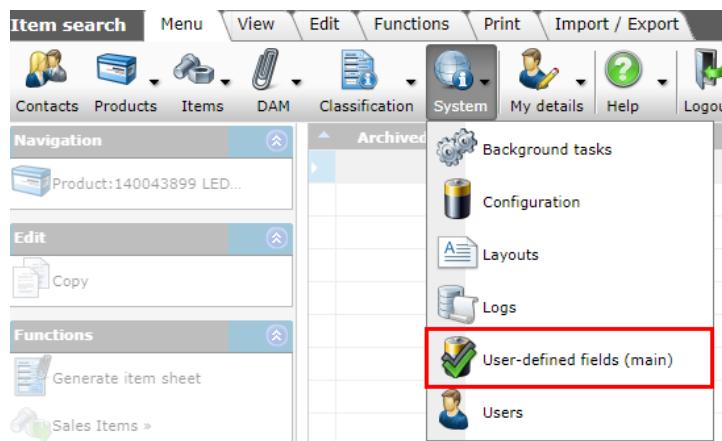

The screenshot shows the 'Edit - Frank Oerlemans' dialog box. It has tabs for Contact person, Organization, Private Person, Location, Department, Memo, and User-defined fields (which is highlighted with a yellow box). The 'Contact' section shows 'Roles' with checkboxes for Contractor (checked), Installer, Tiler, and Project developer. At the bottom are buttons for 'Edit the previous one', 'Edit the next one', 'Save record' (highlighted with a red box), and 'Cancel'.

4. Click on *Save record*.
5. Repeat this action for other contacts.

5.15.4 Create Selection list

To be able to assign roles, for each of the Roles a user-defined field of type *Selection list* needs to be created. In this example these UDFs need to be created on the entity Project:

1. Through the Menu, go to *System > User-defined fields (main)*.

The screenshot shows the 'System' application interface. The top menu bar includes 'Item search', 'Menu', 'View', 'Edit', 'Functions', 'Print', 'Import / Export'. Below the menu is a toolbar with icons for Classification, System, My details, Help, and Logout. On the left, a navigation panel shows 'Navigation' (Product:140043899 LED...), 'Edit' (Copy), and 'Functions' (Generate item sheet, Sales Items...). The main area displays a list of system items with columns for 'Archived' and 'Name'. The 'User-defined fields (main)' link is highlighted with a red box.

2. In the list, click on the link *Projects*.

User-defined fields (main)

Image	Description
	Products
	Project monitoring
	Project specific materials
	Projects
	Publicistic codes

3. Under Edit, click on *+Add*:

User-defined fields (sub)

Archived	V T	Name
		Field Options
		Field Values
		User def fields type:...
		Edit
		+Add
		Modifv

4. In the pop-up window:

Edit - Contractor

User def field	Picklist	Tooltip (en)	Memo	Translations
Name	UDF_Contractor			
Normalized name	UDF_Contractor			
Sequence	<input type="text"/>			
Type	Selection list			
Label	Contractor			
Header	Contractor <input checked="" type="checkbox"/> Automatic

<input type="button" value="Edit the previous one"/> <input type="button" value="Edit the next one"/> <input type="button" value="Check expression"/> <input type="button" value="Save record"/> <input type="button" value="Cancel"/>				

User def field tab

- Name: Type a name for the user-defined field.
- Type: Select the option **Selection list**.
- Label: Type a label name.
- Overview: Select the entity for which the multiple choice list was created; in this example **Contact person**.

5. Next, go to the *Picklist* tab and select the option(s) for this role:

6. Click on *Save record*.

7. Repeat this process for all other roles.

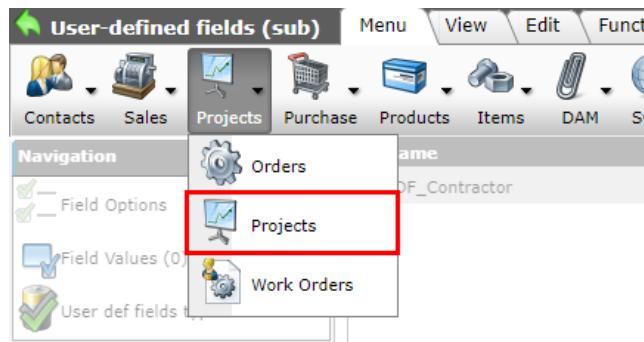

Tip: To easily see for which entity, which Selection list fields with which choice (role) have been created, it is useful to add the **Picklist** and **Entity** fields to a screen layout for the Overview User-defined fields:

Name	Type	Label	Application	Picklist	Entity
UDF_Contractor	Selection list	Contractor			with roles: contractor PRJ.Project

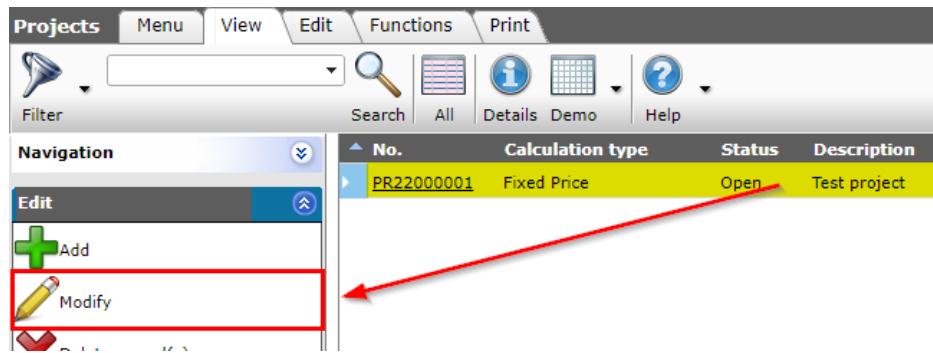

5.15.5 Using a selection list

To see the resulting selection list:

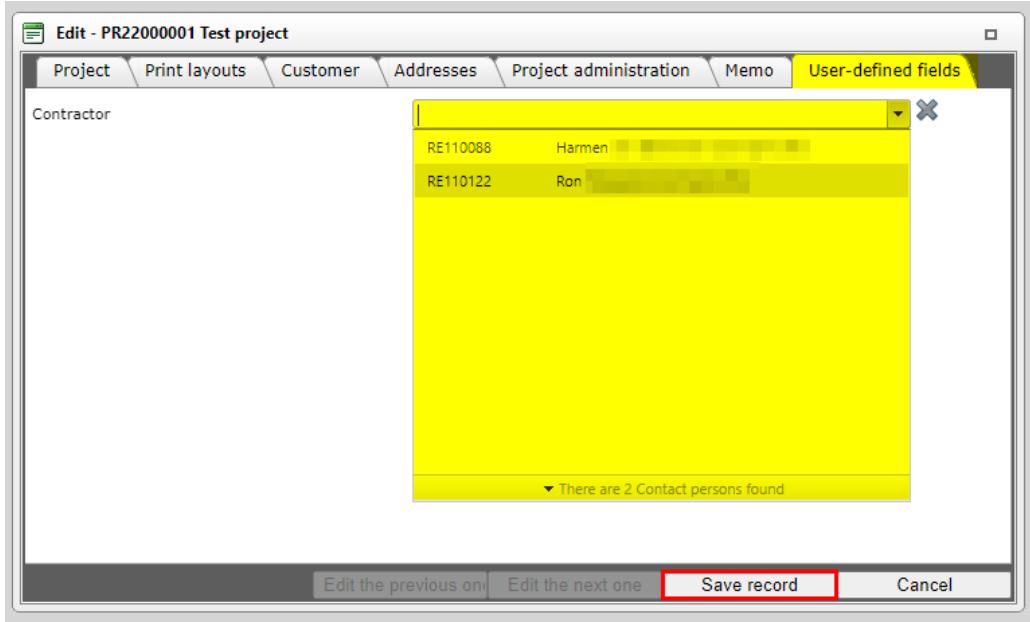

- Through the Menu, go to the overview of Entity where you added the selection list(s), in this example Projects:

- Modify(or Add) a (new) project:

3. In the pop-up windows, on the tab User-defined fields, you can now select, for instance, a Contractor:

5.16 GUID

Use: The GUID UDF can be used to add a Global Unique Identifier, which is commonly used with (SQL) databases.

Data types allowed: Unique alphanumeric string of 36 characters.

Add next record Check expression **Save record** Cancel

Note: GUID UDF fields will *not* show with records of the entity to which they are added. As GUID will usually be generated by the database server. The GUID can then be imported into a GUID UDF in COS.

6 Appendix B: Nested single choice lists

The user-defined field of type Single Choice can be used to make nested choice list, where after a first choice—a second (or third, fourth, etc.) choice can be made.

Example

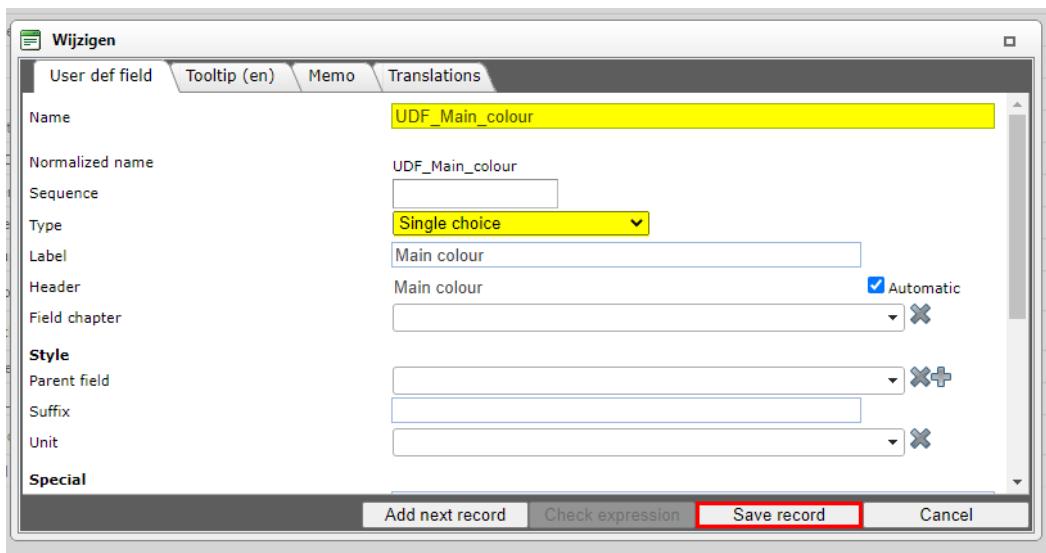

A product is available in several variants of a main colour, for instance:

Material colour:

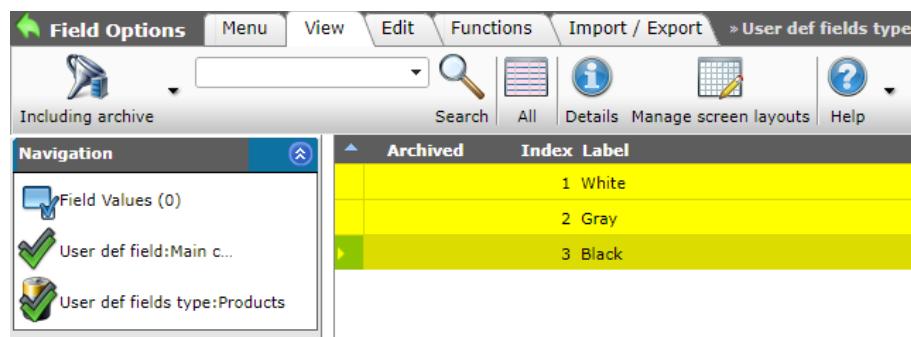

- White
 - Cream white
 - Ice white
- Gray
 - Light gray
 - Dark gray
- Black

To create a nested choice list:

1. First, create a single choice list for the *Main colour*:

2. Next, create the main colour options:

Archived	Index	Label
	1	White
	2	Gray
	3	Black

3. Now, create a new single choice UDF for the *Detail Colour*.

<input checked="" type="checkbox"/> User def field:Colour...		2 Ice white		
<input checked="" type="checkbox"/> User def fields type:Products		3 Light gray		
		4 Dark gray		

Figure 5. All sub-options for Detail colour.

5. When filling out the **Main colour** at a Product record, the **Colour detail** drop-down will only show the sub-options for the chosen **Main colour**:

The screenshot shows a software interface for editing a product record. The title bar indicates the product is '140043898 LED E T5 BATTEN 600 9W 800LM 3000K CT (langer) Oppele 069567126'. The main area contains several input fields and dropdown menus. Two specific fields are highlighted with a red box: 'Main colour' and 'Colour detail'. The 'Main colour' dropdown is set to 'White'. The 'Colour detail' dropdown is open, showing three options: 'White', 'Cream white', and 'Ice white', with 'White' being the selected option.
